The REACH EU Chemical Decree

The REACH EU Chemical Decree (registration, evaluation, authorization and restriction of chemicals) regulates, among other things, the use of so-called SVHCs (substances of very high concern) and PAHs (polycyclic aromatic hydrocarbons), which are commonly used in rubber manufacturing.

key-electronic knows the relevant requirements on industry/commerce and has already carried out various projects under conditions of exceptional avoidance of these substances. As a commercial company, we constantly endeavor along with our suppliers to keep improving the properties of our products so that they are free of substances that present a risk. According to Article 3 of the REACH Decree (EU) 1907/2006, key-electronic is neither a producer nor an importer of these substances, nor brings such substances into contact with their products. Our company imports finished products into the EU. None of these products have a concentration above 0,1 percent by mass leads 33 of the latest ESCHA learning list from January 2021.

The above information we give to the best of our knowledge and belief on the basis of information received from our suppliers. This letter is not an extension of the statutory warranties.

If you have more questions, please contact us.
